

Elevated Care through Comprehensive Telemedicine

TelePediatrics & TeleNICU

Comprehensive Pediatric and High-risk Newborn Care

Specialist TeleMed's pediatric telemedicine program delivers access to experienced specialists 24/7/365. This enables hospitals of any size or in any location the ability to provide immediate, expert care for children or newborns with new or exacerbations of existing medical concerns.

THE VALUE

Comprehensive Coverage

STeM's specialists can provide primary coverage or bridge staffing gaps during nights, weekends, and other critical times, ensuring seamless care delivery. Hospitals can even schedule pre-planned coverage to manage foreseeable staffing shortages.

Integrated Support

STeM pediatric specialists collaborate as part of the hospital care team, offering consultations, emergency management, and peer-to-peer collaborative care to support local providers.

Reduced Transfers

By equipping local hospitals with these available telemedicine resources, STeM helps retain appropriate patients and enhance patient care. Reducing transfers also increases patient and parent satisfaction by minimizing the stress of traveling to distant facilities and being separated from loved ones.

Optional NICU Support

With STeM's expertise, hospitals can help support or maintain NICU operations providing rapid assessment, stabilization, and care planning for newborns.

STeM transforms the way hospitals deliver neonatal and pediatric care, ensuring that every child and newborn has access - regardless of geography. With STeM's TelePediatrics and TeleNICU (if needed), hospitals can confidently meet the demands of their patients while strengthening the quality and availability of care in their communities.
