

# Elevated Care through Comprehensive Telemedicine

## TelePulmonology

### Outpatient Pulmonology Telemedicine

As the aging population continues to grow, both acute and chronic lung conditions are more frequently encountered in the outpatient setting. Outpatient pulmonology services delivered through telemedicine can optimize chronic disease management and patient satisfaction within the local care environment. This support decreases the workload on overtasked primary care providers and helps decrease hospitalizations.

#### THE VALUE

##### Health Systems

Improved System Growth and Stability  
Increased HCAHPS Scores

##### Clinics

Enhanced Patient Confidence and Engagement  
Reduced Patient Leakage

##### Local Providers

More Patient Retention within the Medical Community  
Better Support for Local Primary Care Clinicians

##### Patients

Fewer Hospitalizations  
Convenient and Timely Continuity of Care  
Lower Costs

#### SERVICE OVERVIEW

We support local pulmonologists in a non-competitive, synergistic manner. **Or** we can establish a standalone clinic to accommodate new and existing patients.

#### CLINIC COVERAGE

Regularly scheduled 4-hour clinic blocks provide ease of scalability and staffing  
Medication Management & Optimization

#### ADDITIONAL SERVICES

Sleep Study Interpretation  
PFT Evaluation

#### CONDITIONS TREATED INCLUDE
